

#### .NET CONSULTANCY

Developers, Lead Developers,  
Certified Scrum Masters,  
Architects and Coaches.

#### .NET FIXED PRICE

.NET Fixed Time Fixed Price  
Projects, from scoping to  
maintenance and from co-  
sourcing to off-shoring.

#### .NET CODE REVIEWS

Code reviews, Architecture  
Audits, Performance Testing.

#### .NET PROJECT SCOPING

No time or experience with  
writing good developments  
requirements? No worry we can  
help you with the scoping and  
writing your request of proposals  
or you can hire one of our  
Functional Analysts with .NET  
experience.

#### .NET FRAMEWORKS

Do you need a framework? We  
will write a custom made for you  
or you may use one of our free  
frameworks: GUI Framework,  
Server Framework, Testing  
Framework, etc...

# Euricom Software Factory: PMIS

DON'T LOSE CONTROL OF YOUR DEVELOPMENT PROJECT

- **Centralize project information**

In addition to storing core project information, the **Project Management Information System (PMIS)** maintains history, controls workflows and defines who has access to the information.

- **Facilitate project communication and collaboration**

Collaborative project activities include scheduling meetings, jointly developing proposals, video chat, desktop sharing and informally brainstorming project strategies.

- **Automating project processes**

Automating project processes, such as a change control, is one of the strengths of the PMIS.

**B**usiness and technology executives are being asked to do more with less all the time. Managing complexity, improving security and enabling agility are top priorities. But maintaining legacy systems and supporting current technology consumes vast amounts of the typical IT budget. This leaves limited budgetary resources and manpower to stay on top of new technologies and develop applications to meet the core needs of your business. **Application Lifecycle Management (ALM)** is an effective solution.

ALM is a method of managing software development and IT initiatives by automating the process from end to end, integrating information from every stage of the project. ALM helps you synchronize business goals and IT investment priorities and can help transform IT from a cost center into a valuable business asset.

The Euricom Software Factory is a lean and proven ALM solution. The Euricom Software Factory is created to offer a framework in which .NET Software Development Projects can be successfully finished within **time, scope, budget and quality** standards.

A set of standards, frameworks, methodologies and processes are available on a **collaborative infrastructure**, called Project Management Information System (PMIS), to create a real time central workspace for both technical as well as business project members.

**Dashboarding** on technical-, functional- and business constraints is incorporated, ensuring maximal control and visibility on the project.

#### VB6 TO .NET MIGRATIONS

Hard to find VB6 developers or maintaining legacy code? Our consultants and VB6 migration toolkit can save you a lot of time and money.

#### APPLICATION LIFECYCLE MANAGEMENT

From assessment to building a software factory.

#### SQL SERVER

Architecture, Tuning, Audits and Upgrades.

#### MOSS

Microsoft SharePoint Products and Technologies.

#### MICROSOFT DYNAMICS CRM

Our specialized consultants will help you with your CRM implementation.

For more information on any of our products or services please visit us on the Web at: [www.euri.com](http://www.euri.com) or ask for a demo by calling +32 (0)15 26 24 40

## Features and Benefits

Euricom Software Factory

The PMIS build on SharePoint (MOSS2007), offers not only features and benefits for the project manager but for all the team members.

The PMIS has a built-in **requirement workflow**, change control workflow and a UI Prototyping tool to support eliciting, documenting, analyzing, prioritizing and agreeing on requirements and then **controlling change** and communicating to relevant stakeholders.

Developers can use an **electronic dashboard** to organize their work, even with decentralized teams and home workers. They benefit of a **wiki library** to share knowledge, brainstorm ideas, collaborate with the team on a design, create an instruction guide or build an encyclopedia of knowledge. A formal code review process with Key Performance Indicators (KPIs) will remove common vulnerabilities.

The **quality of the project** will be controlled by daily builds with automatic unit testing and code analysis, test plans, test case lifecycle support and an integrated bug tracking tool. All key process areas have their own **dashboard with KPIs** and notifications if certain thresholds will be exceeded.

The **Project Workbook** is an on-line repository for all project correspondence, inputs, outputs, deliverables, procedures and standards that are used for performing project audits, orientation of new team members and communication with management and customers during the life cycle of a project.

## Frequently Asked Questions

- **How is the PMIS priced?**  
*It's not a product, we will setup a PMIS for a new project or a running project at your site based on our proven template and your business processes. During the project we will manage and/or coach the project and will customize the PMIS to your needs. After the project you will own a PMIS template tailor made for you. Or you can start with our environment = Zero Cost Investment.*
- **Do I need development skills to extend the PMIS?**  
*No, the PMIS can be customized by persons with basic SharePoint knowledge.*
- **I already have some corporate tools for time tracking, testing, etc... Can we integrate with other products?**  
*Yes, it's possible to collect and visualize data from other systems like SAP (Cats), Quality Center, MS Project Server, etc...*
- **As a project manager, I prefer MS Excel and MS Project server, because they just work. Can I still use these products?**  
*Yes, but in combination with a PMIS and the Excel Services of MOSS 2007 they become first class enterprise products.*
- **Do I need Team Foundation Server 2008 to setup the PMIS?**  
*No, the PMIS is loosely coupled, but TFS can be fully integrated and will deliver some useful features.*
