

SharePoint

Euricom - Our vision and approach

When it comes to SharePoint we do not approach it as just another piece of your infrastructure. We understand that SharePoint is most valuable to you when it is used correctly and therefore we approach it differently than most other companies. For us, SharePoint is not plug-and-play.

Vision statement

Because most of the SharePoint installations are done by integrators and infrastructure specialist, SharePoint is very often treated the same as for instance Active Directory or Exchange. Although integration with those types of systems is one of the incredible strengths of the product, the main strength that companies will benefit from is what SharePoint brings to the table when it comes to automating business processes, workflows and collaboration platforms for users. That are not infrastructure services, those are application services.

Our approach

Euricom offers specialized SharePoint application support services ranging from installation and application development over SharePoint analysis to coaching and training of your staff. With this offer package, Euricom can make sure that you only need one partner for all your SharePoint needs.

Because of this offer, our approach for SharePoint is as effective as it might be unconventional. When you as a customer approach us, our work does not start with the installation of SharePoint, it starts with an assessment of your needs. Only when it has been determined that SharePoint is the answer to your specific question, we will install SharePoint and prepare the web applications, site collections and sites that you might need. It is our strong believe that SharePoint can help you in many ways, but it's better to have no SharePoint than a bad SharePoint. Your SharePoint will be a success only when it has been thought through beforehand.

Once your SharePoint is up and running, Euricom can provide you with everything you need to get your people up and running with your new SharePoint application.

Want to upgrade? Want more integration with other Microsoft systems? Want data from your back-end systems to show up in your SharePoint? No problem, we can deliver you the finished product, or assist you and your staff every step of the way.

Recommendations

Development for this environment should follow a clear and well-defined ALM process to increase quality and team productivity, and to reduce development costs.

Euricom recommends the use of Microsoft Visual Studio 2008 Team Foundation Server features to more fully support your application development efforts. When used with Microsoft Visual Studio 2008, Team Foundation Server provides an integrated development environment and a single source code repository that supports the process activities, the integrated reporting of progress, and the team roles involved in a software development project.

.NET CONSULTANCY

Developers, Lead Developers,
Certified Scrum Masters,
Architects and Coaches.

.NET FIXED PRICE

.NET Fixed Time Fixed Price
Projects, from scoping to
maintenance and from co-
sourcing to off-shoring.

Next generation SharePoint

With SharePoint 2010 coming in the first half of 2010, SharePoint is taken to a new level. Not only will it make it even easier to create custom solutions on top of the SharePoint platform, SharePoint will bring existing features to a new level. BI capabilities, a complete new Enterprise Search engine, more user friendly site creation and adjusting, it will all be featured in this next generation step of SharePoint.

Early adoption

The benefits of the SharePoint 2010 will make that a lot of people will want to upgrade from 2007 to 2010. Be one of the first to start this transition. We will help you every step of the way.

Enterprise 2.0

Is your company ready to embrace the social media and communication opportunities offered by web 2.0 sites? SharePoint 2010 offers you the opportunity to make communication between your people as natural as possible, making communication not an overhead, but an asset. Euricom can help you with your internal assessment for these new opportunities and guide you in making your company into a leader in communication and collaboration.

Frequently Asked Questions

- What is the licensing cost?**
If you have a Microsoft Enterprise agreement for licenses, changes are you already have SharePoint in your portfolio. If not contact your license vendor to check licensing for SharePoint. If budget is a problem, remember that WSS 3.0 the base components for SharePoint are free of charge.
- Can SharePoint connect to my back-end systems?**
The answer is yes. For a lot of the market leading back-end systems (e.g. SAP, ECM) there are components available to link them with SharePoint. If not, through custom development in .net almost every system can be coupled with SharePoint.
- How can SharePoint help my organization?**
SharePoint helps your business be as productive as possible by offering easy process automation through workflows, a central document workspaces for your teams and people, dashboarding for BI purposes, full Enterprise Search capabilities and even social capabilities to make sure your workers communicate as best they can with each other.
- We tried SharePoint ourselves, but after 6 months, we can't find anything anymore. Can you help us?**
Again, the answer is yes. A lot of companies tried to start up SharePoint solutions by just making them available to business users without a governance plan or architecture. We can make sure that these are put in use and help you make a clean start with SharePoint so it will help your organization reach its productivity goals.
